

BOSS® Foiling, Spot UV-style effect & Holographic films.

The Matrix® Pneumatic systems can now create foiling and spot UV-style effects, in 4 Easy Steps.

Special dies are not required to create these new effects. They're achievable due to the adjustable pressure from the pneumatic rollers, using any digital printer.

The process to create such effects on-demand still works by using heat transfer technology, but at a fraction of the cost of producing individual dies for each job.

Works with:

MATRIX[®]
530
DUPLEX

MATRIX[®]
PNEUMATIC

TYPICALLY USED FOR:

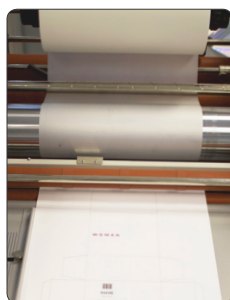

- Packaging
- Business cards & stationary
- High end, bespoke prints
- Security print
- Wedding Stationary
- Book Covers
- Proofing Samples

Step 1 Background Image

1

Print your background image. This should include all parts of your design that you **do not** want to foil or spot UV.

Step 2 Laminate

2

Laminate your background image with your desired laminating film. The film must be **Corona Treated**.

(Contact us for details)

Step 3 Foiling Image / Text

3

Feed your laminated sheet back through your printer and print the required image/text you wish to foil or spot UV onto it.

Your foiling image must be set as 100% black (C:0, M:0, Y:0, K:100).

For a spot UV image the print can be any colour or a mixture of colours.

Step 4 Foil or Spot UV

4

You can now feed your print back through the Matrix.

The foiling film will adhere to the black toner/ink.

Spot UV film will adhere to the toner/ink whatever colours have been used.

This technique costs just a fraction of the original foiling process.

Foil is available in various colours. Contact us for full details.
